Support Operations

July 22, 2026

Contents

Summary	1
CSAT Trend	1
Ticket Volume by Channel	2
Notes for Next Month	2

Summary

Ticket volume grew 9% month-over-month, in line with the new-customer cohort from May, but average resolution time improved to 4.1 hours (down from 5.3 hours in January) thanks to the macro library shipped in April. Customer satisfaction (CSAT) climbed for the fifth consecutive month.

CSAT hit a new high of 4.47/5 in June. The macro library and the revised first-response templates are the two changes support leadership credits most directly — both shipped in April, and the CSAT trend inflects right around that point.

CSAT Trend

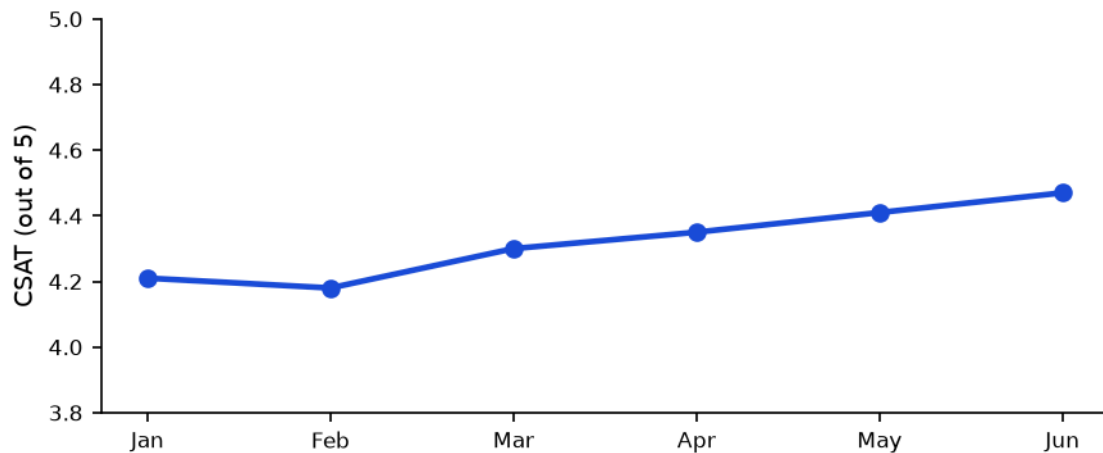

Figure 1: Monthly CSAT, six-month trend

Ticket Volume by Channel

Channel	Tickets	Avg. resolution	CSAT
Email	2,140	5.2h	4.31
Chat	3,680	2.1h	4.58
Phone	890	8.4h	4.22
Community forum	410	12.6h	4.09

Community forum is the outlier. 12.6h average resolution is more than double any other channel — largely because it's staffed part-time by two engineers rotating off their primary team. Support Ops has a proposal to add a dedicated part-time community moderator in Q3.

Notes for Next Month

- Chat continues to be both the highest-volume and highest-CSAT channel — worth understanding *why* before assuming it will hold as volume grows.
- Phone resolution time is trending up slightly (7.6h to 8.4h over three months); worth a closer look before it becomes a trend worth flagging.
- The community forum staffing proposal goes to the Q3 planning review.
