New Hire Handbook

A guide for your first 90 days

Contents

Welcome to the Team 3

Your First Two Weeks 4

Engineering Practices 5

How Engineers Spend Their Time 6

Appendix: Team Directory 7

Page numbers above are computed automatically by Paged.js using `target-counter(attr(href), page)` — they stay correct even if content shifts, because Paged.js paginates first and resolves the references afterward.

1. Welcome to the Team

We're glad you're here. This handbook covers what to expect in your first two weeks, how the engineering org works day-to-day, and the practical logistics (badges, benefits, equipment) that don't fit neatly anywhere else. Unlike the two other examples in this lab (`custom-print-css`, which hand-splits content into fixed-size page blocks), this document is written as one continuous flow of HTML — Paged.js measures it and decides where each page break falls automatically.

That matters in practice: edit a paragraph above, add a sentence, and every page break, running header, and page number in this document recalculates itself. Nothing here is hand-positioned.

Try it yourself. Open `index.html`, add a paragraph anywhere in this section, and reload — the Contents page numbers and every page break after this point update automatically.

2. Your First Two Weeks

The first two weeks are deliberately light on output expectations and heavy on context-building. You'll pair with your onboarding buddy most afternoons, and mornings are yours for setup, reading, and small warm-up tasks.

Week 1

- Laptop setup, VPN, and access provisioning (day 1)
- Architecture overview sessions with each team lead
- Ship your first "good first issue" pull request

Week 2

- Shadow an on-call rotation (no pages, just observing)
- Attend your first sprint planning as a full participant
- 1:1 with your manager to set 30/60/90-day goals

No pager duty in week one or two. You'll be added to the on-call rotation starting week 5, after a shadow rotation and a dedicated incident-response walkthrough.

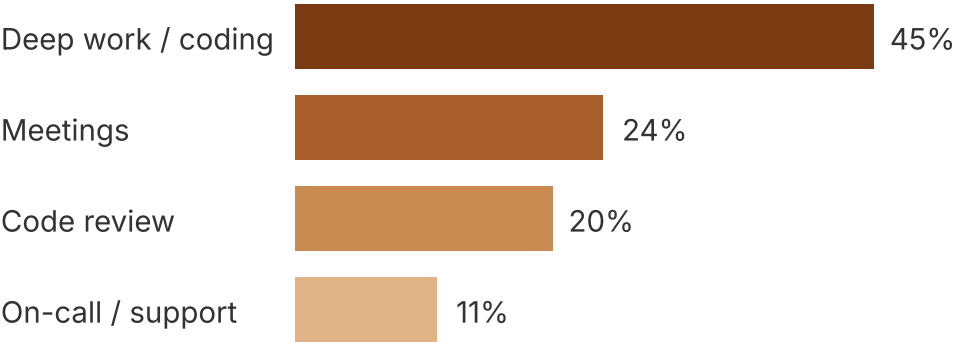

3. Engineering Practices

A quick reference for the tools and conventions you'll run into constantly.

Area	Tool	Notes
Version control	GitHub	Trunk-based, short-lived branches, required review
CI/CD	GitHub Actions	Canary deploys, auto-rollback on error-rate spike
Incident response	PagerDuty	On-call starts week 5, shadow rotation first
Code review	GitHub PRs	One approval required, two for `infra/`
Docs	Internal wiki	Architecture decisions recorded as ADRs

4. How Engineers Spend Their Time

Based on an internal survey of the engineering org, here's roughly how a typical week breaks down. This is illustrative, not a target — some weeks (launch weeks, incident weeks) look very different.

Appendix: Team Directory

This example's `style.css` includes a (disabled) attempt at a landscape appendix page via a named `@page wide` rule — see the comment there. Paged.js recognizes the page name but doesn't correctly resize mixed-orientation named pages yet (a known open upstream issue: [pagedjs/pagedjs#6, #281](https://github.com/pagedjs/pagedjs/issues/281)), so this page stays portrait like the rest of the document rather than breaking the layout with clipped content.

Team	Lead	Slack channel	On-call rotation	Docs	Timezone
Platform	N. Osei	#team-platform	Weekly, Mon 9am handoff	wiki/platform	US-East
Billing	S. Kim	#team-billing	Weekly, Wed handoff	wiki/billing	US-West
Mobile	A. Novak	#team-mobile	No pager — business hours only	wiki/mobile	US-East
Data	P. Adeyemi	#team-data	Weekly, Fri handoff	wiki/data	UK
